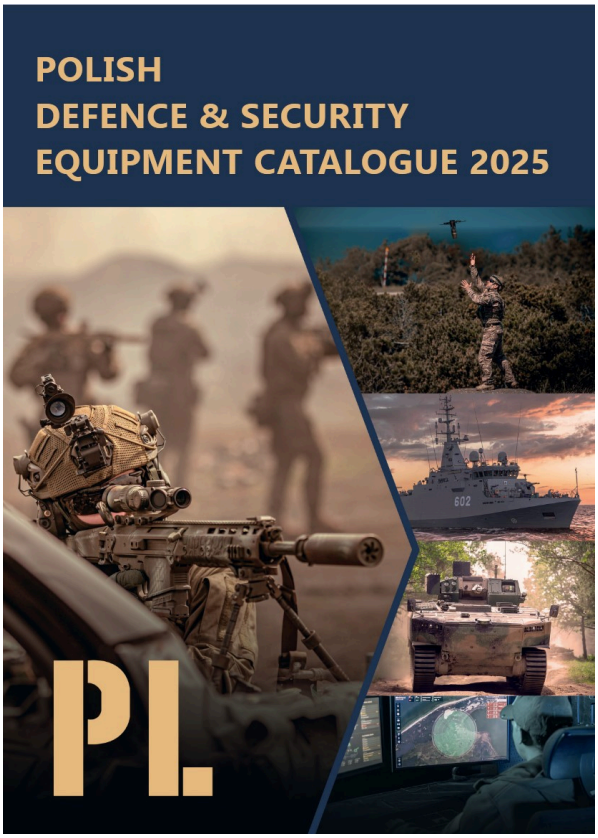
Polish Defence and Security Equipment Catalogue (2025)



POBIERZ KATALOG

For years, Poland has been increasing its defense spending, modernizing its Armed Forces and preparing itself for growing threats. An accurate diagnosis of the international situation has translated into the development of innovative solutions in the defense industry.

The war in Ukraine has accelerated the technological development process of Polish companies, whose products are largely tested in the full-scale armed conflict and constantly modernized according to the changing requirements of the modern battlefield. Now, thanks to the establishment of the NATO Ukraine Analysis, Training and Education Center in Bydgoszcz, the exchange of experience in the use of various systems will be even more systematic. This makes our national solutions extremely innovative, future-oriented and often ahead of the competition. They have been positively verified in combat conditions, which testifies to the high quality of Polish armaments production. As a result, they meet both the high expectations of the Polish state and those of the most demanding foreign customers.
